

SOMA forward pass on RTX 5080

● SOMA-X (PyTorch + Warp) ● SOMA-JAX · full fit (pure JAX) × SOMA-JAX · full fit (JAX + Warp svd3) ● SOMA-JAX · linear fit (approx.)

Per-forward time (median, 95% CI < 1%)

Throughput (median, 95% CI < 1%)

mid-LOD SOMA mesh: 18056 verts, 78 joints · LBS-only · median over sustained-clock-warmed samples

skeleton fit: full = SOMA-X's RBF + Kabsch solve; pure JAX runs upstream's rotation method, Warp svd3 a plain-Kabsch kernel · linear = cheaper approximation
